Chapter 1

Builtin Style and other package

1.1   Default Styles

By default: There are "4" page styles available.
There names are followings:
Names with arabic numering scheme

1. empty , no header and no footer

2. plan , footer has the numer at the center

3. headings , no footer header contains name of chapter and section.
   Please Note: "article" class has no chapter.

4. myheadings , no footer header contain chapter name and user suplied info

1.2   Modification in footer style

Threre are three ways to modify.

1. Thou can redefine these styles

2. Quickly modify using Latex variables, something on fly-mode

3. Use other package , which has more styles available in it e.g. "fancyhdr"

1.2.1   Commands for Page attributes

   I pagstyle "plane"

  II thispagestyle "empty" , header and footer only for this page

 III pagenumering "x" , arabic, roman, Roman, alph, Alph

 IV pagebreak

  V nopagebreak

 VI thepage , insert the current page number e.g. in the footer or header.

VII clearpage , ends the page and puts the pending figures and tables on the separate float page with no text
